

***Gu* Syndrome: A Valid Ancient Syndrome**

Cynthia Lankenau, DVM, RH (AHG), CVA, GDVCHM, ACVCHM (IVAS),
GDVA, MS-TCVM

Gu Syndrome is an ancient medical concept which is a valid clinical approach for chronic super-infections by funguses, parasites, viruses, and other microbes that are often hard to detect. *Gu* is the ancient Chinese symbol for extreme pathological yin--the dark side of life, the worst nightmare of any human being. It represents darkness, rottenness, slithering vermin, poisonous snakes, betrayal, black magic, backstabbing murder, and in medical terms, progressive organ decay accompanied by torturous pain and insanity, the definition of our chronic diseases. Many of today's diseases that are difficult to treat and hard to resolve are examples of *Gu* syndrome, including all chronic hard to resolve and resistant worm infestations, tapeworms, roundworm, hookworm, whipworm, and other degenerative infection, filariasis, liver flukes, trichinosis, systemic candidiasis, brucellosis, all types of chronic and debilitating nervous inflammation, Lyme disease, and other borrelia infection, tick fever, babesiosis, ehrlichiosis, Rocky Mountain Spotted Fever, rickettsia, bartonella, tick-borne encephalitis, other forms of chronic encephalitis, and meningitis, malaria, anaplasmosis, West Nile Fever Virus, Feline and Equine herpes, FIP, and cases of Equine Head shaking and chronic upper respiratory diseases.

Most Chinese scholars generally dismissed *Gu* syndrome as an 'ancient, feudalistic and superstitious' belief in demons and exorcist practices that have little or no value in modern clinical practice. However, when looking deeply at these ancient texts, a very modern problem was described: Super-infections, that is, these demons are systemic funguses, parasites, viruses, spirochetes, other hidden pathogens, the toxins they produce and the biofilm they generate.

The herbal treatment includes the use of many aromatic food grade botanicals to 'drive out the demons' and eliminate the *Gu* in the biofilm and extracellular matrix. This paper will explore the use of these formulas in the treatment of many of today's chronic diseases.

Objectives:

1. To validate the use and study of ancient Chinese medical philosophies as to their importance in today's chronic diseases
2. To use the therapeutic principles described in the *Gu* syndrome in the treatment of chronic super-infections caused by viruses, bacteria, protozoa, spirochetes, and other parasites.

Neonatal Septicemia: The Story of Patches and Bob, and Albert

Cynthia Lankenau, DVM, RH (AHG), CVA, GDVCHM, ACVCHM (IVAS),
GDVA, MS-TCVM

Sepsis is the number one cause of neonatal foal and calf mortality and is broadly defined as an overwhelming systemic inflammatory response syndrome (SIRS) triggered by infectious organisms and characterized by alterations of temperature regulation. In Chinese Medicine, sepsis occurs when *Wei Qi* unable to defend against Pathogenic *Qi*, and the Pathogen invades. Due to deficient state of newborn, potential of reaching deepest levels and layers of the body, separating *Yin* and *Yang* causing Death. Calves that fail to absorb an adequate amount of gamma immunoglobulins (IgG) from consumption of colostrum are the most susceptible to septicemia. The calf's initial *Wei Qi* is colostrum. Classical Chinese Medicine described the Six body layers in The Treatise on Cold Invasion where a transformation into heat can occur at the *Yang Ming* (Stomach/LI) layer. The *Wen Bing* philosophy describes the invasion of a Heat Pathogen as it penetrates the *Wei* level and then deepens into the *Qi* level. The information from these philosophies allows the practitioner to prevent further disease development and with the herbal formulas designed for these different layers of disease penetration, can offer therapeutic options to expel the pathogenic factors. Two cases using *Gan Mao Ling* and Early Comfort, a Kan tincture of *Huo Xiang Zheng Qi San*, illustrate the successful treatment of neonatal septicemia using principles from Classical Chinese Medicine.

Objectives:

1. To recognize the repercussions of *Wei Qi* deficiency in disease progression
2. To understand the use of Chinese Herbal Medicine in the treatment of neonatal septicemia
